Michael Huang

Oakland, CA | (415) 505-8933 | michael.micah.huang@gmail.com | www.linkedin.com/in/michael-micah-huang

Education

California Polytechnic State University - San Luis Obispo — San Luis Obispo, CA
Bachelor of Science in Computer Science, Minor in Philosophy — *Graduated: August 2025*

- Dean's List — Fall 2024 & Spring 2025 (Senior Year)

Professional Experience

Intuit Credit Karma — April 2026 – Present
Contract AI Engineer — *Oakland, CA*

- Built an AI code review agent pairing LLMs with static analysis (AST parsing, call graphs) and context engineering, reviewing ∼**70 PRs/day** across **3 repos** and catching **600+ issues**
- Built usage telemetry for internal AI tooling on Google Cloud, tracking ∼**15,000** AI workflow runs per day (∼**30** per user)
- Maintain an internal marketplace of AI workflows used by ∼**500** non-technical employees and streamline their onboarding to AI tools

Dynamic Experts — December 2025 – January 2026
Contract AI Engineer — *Remote*

- Built a production-grade MCP (Model Context Protocol) server using Gemini deep-research, integrating Gemini 2.5 Pro with markdown sanitization and automated citation handling
- Built async polling architecture with **90-minute timeout handling** to support long-running inference tasks (**60+ minutes**)
- Delivered a fully documented codebase with **157 unit tests** (Vitest)

Solidigm (Formerly Intel NAND) — June 2022 – August 2023
Automation and Product Engineering Intern — *Folsom, CA*

- Migrated legacy Python 2.7 automation frameworks to Python 3.x, modernizing the codebase for **600+ production-line tests** and reducing false-positive failures by ∼**30%**
- Developed automation scripts that increased test coverage, saving the engineering team approximately **8 hours of manual verification per SKU** during testing cycles
- Triaged and fixed failing test tickets across the production line, identifying root causes in both test scripts and hardware setup

Projects

BudgetTracker | *React 19, TypeScript, Node.js, Express, PostgreSQL, JWT, Vitest*

- Built a full-stack budget management app with JWT authentication, expense tracking, and a visual spending dashboard with dark/light mode toggle
- Designed a REST API with Express and PostgreSQL, enforcing per-user authorization on every query and zod input validation
- Migrated the data layer from MongoDB to PostgreSQL, backed by **249** Vitest and Supertest tests

Modular Resume Build System | *Python, LaTeX, pytest*

- Built a Python build pipeline that assembles tailored single-page resumes from shared LaTeX snippets and version-specific content, outputting compiled PDFs to a clean output directory
- Implemented **.env secret injection** to keep personal info out of version control, using a custom {{`PLACEHOLDER`}} templating system with no external dependencies
- Wrote **61 pytest tests** covering env loading, template injection, snippet assembly, document structure, and config integrity

Hackathons

- **2nd place** at three hackathons: Claude Code Hack Day @ AWS (out of 25 teams), Before the Ballot, and Lovable × Vapi

Skills

Languages: Python, TypeScript, JavaScript (ES6+), C/C++, SQL
AI/ML: LLMs, Agent Orchestration, Multi-Agent Systems, MCP, Claude, Gemini, PyTorch, Scikit-learn
WebDev: React.js, Node.js, Express, PostgreSQL, MongoDB, RESTful APIs, HTML5, CSS3
Infrastructure: GCP (BigQuery, GCS), Docker, Kubernetes/k3s, Redis, nginx, Uvicorn, CI/CD
Tools: Git, Linux, Vitest, pytest, Firecrawl, Jira, Confluence, Agile/Scrum
